

Disposal Chutes

Additional Resources:

- [Complete OSHA Standard](#)

Whenever materials are dropped more than 20' to any exterior point of a building, an enclosed chute shall be used. 1926.252(a)

When debris is dropped through holes in the floor without the use of chutes, the area where the material is dropped shall be enclosed with barricades not less than 42" high and not less than 6' back from the projected edges of the opening above. Warning signs of the hazard of falling material shall be posted at each level. 1926.252(b)
