- Scaffold Safety Awareness
- Scaffolding Safety Do's and Don'ts

Welding, Cutting, & Brazing

Workplace Violence:

- Active Shooter
- Preventing Workplace Violence

TOOLBOX SAFETY TALKS

Brought to you by
Construction Safety Specialists, Inc.

What sets CSSI Toolbox Safety Talks apart from all the others?

- Provides instructors with key information on how to deliver the talk. Gives instructors references for creating engagement among the crew.
- Provides a detailed overview of the topic to share with the crew.
- Provides OSHA as well as industry standards for procedures and important guidelines.
- Provides detailed information on action that should be taken.
- Provides CSSI's perspective on the topic.
- Provides "Fatal Facts" about each of the topics.
- Every Toolbox Safety Talk includes a "Test Your Knowledge" component for instructors to test crew retention.
- Allows for open exchange of concerns and specific hazards the crew may face on any particular day at the job site.
- Provides a sign-in sheet for tracking training participation among the crew.

A Toolbox Safety Talk is an informal group discussion that focuses on a particular safety issue. These tools can be used daily to promote a department's safety culture and facilitate health and safety discussions on construction sites. These group discussions are normally short and are generally conducted at the construction site prior to the commencement of a work shift. It is one of the most effective methods of refreshing workers' knowledge and exchange information with experienced workers. Whether your crew consists of new hires or is full of seasoned workers, using Toolbox Safety Talks will enhance your company's safety awareness and education.

The CSSI team recommends conducting regular Toolbox Safety Talks at the start of the day as a "best practice." Having these readily available is a must for any safety-conscious company committed to making safety a priority on and off the job site.
